

Tempus Database Migration Guide

Step-by-step instructions

1. Open Tempus

Open Tempus as usual.

2. Open the Developer menu

Press F12 to open the Developer menu.

3. Delete the existing Tempus database

Go to the Application menu, open IndexedDB, select TempusDB, and click Delete database.

4. Close the Developer menu

Press F12 again to close the Developer menu.

5. Refresh Tempus

Press F5 to refresh Tempus. This will create a new TempusDB.

6. Open the migration tool

Open the Tools menu, go to Database, and select Migrate.

7. Load the TempusDB.json file

Drag and drop the TempusDB.json file onto the dotted area. Tempus should scan the file and display its specific details in green.

8. Transform and download the data

Click *Transform and Download Excel*. This will download an Excel file and display the resulting status.

9. Close the Migration window

Close the Migrate window.

10. Import the transformed Excel file

Go to the Tools menu, open Import From, and select Excel. Select the newly downloaded Excel file (normally named TempusDB-transformed.xlsx) and click Open.

Migration complete

The Tempus database migration is now complete.
